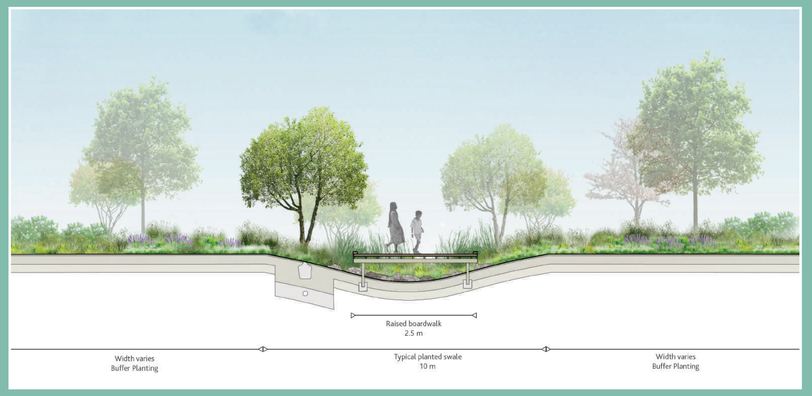
NORTH WEST CAMBRIDGE DEVELOPMENT

Green Corridors
Five new Green Corridors connecting the built development to Brook Leys are being delivered in Phase 2 Infrastructure. These will incorporate sustainable drainage features such as swales and rain gardens as part of the rain water recycling system, alongside walking and cycle access, areas of play and places for residents to meet and relax. Each Green Corridor will have its own unique character reflective of the adjacent neighbourhood and will function as linear parks.



GREEN CORRIDOR SWALE CROSSINGS
